PROFESSIONAL DEVELOPMENT DIVISION

Centre of Excellence Trainings

Echelon Institute of Technology has inaugurated six industry-partnered Centres of Excellence with Intel, IBM, Microsoft, Salesforce, Cisco and NASSCOM. Each centre runs its own lab-wise training, delivered on the partner's official learning platform and guided by EIT mentors in a dedicated lab on campus. Students do not just attend lectures here; they work on the same tools, platforms and certification paths that the industry itself uses, and leave each training with practical skills, project work and a clear route to a globally recognised credential.

01 **Intel AI for Future Workforce Training**
Intel Centre of Excellence · AI Innovation Lab

02 **IBM SkillsBuild Professional Development Training**
IBM Centre of Excellence · IBM SkillsBuild Lab

03 **Microsoft Azure Fundamentals (AZ-900) Training**
Microsoft Centre of Excellence · Microsoft Azure Lab

04 **Salesforce Administrator & Platform Training**
Salesforce Centre of Excellence · CRM & Cloud Innovation Lab

05 **Cisco Cybersecurity Essentials Training**
Cisco Centre of Excellence · Cybersecurity & Networking Lab

06 **NASSCOM FutureSkills Prime Training**
NASSCOM Centre of Excellence · FutureSkills Prime Lab

01 · INTEL CENTRE OF EXCELLENCE · AI INNOVATION LAB

Intel AI for Future Workforce Training

Imagine. Innovate. Lead.

Delivered in EIT's Intel AI Innovation Lab, this training introduces students to Artificial Intelligence the way it is actually built and used. Based on Intel® AI for Future Workforce, it moves from the fundamentals of AI and Machine Learning to computer vision, language AI and responsible innovation, with every concept tried out through hands-on activities and AI-driven mini projects.

What You Will Learn

- Foundations of Artificial Intelligence
- Data Preparation & Exploration
- Computer Vision Basics
- AI in Business, Industry & Everyday Life
- Innovation Challenges & Case Studies
- Machine Learning Essentials & Workflows
- Introduction to Neural Networks
- Natural Language Processing Basics
- Responsible & Ethical AI
- AI Capstone Project

Who Should Join

- Students curious about AI, ML and Data Science
- Beginners with no prior AI background
- Learners planning careers in intelligent automation

Learning Approach

> Short concept sessions are followed by guided lab activities, interactive AI demonstrations and team innovation challenges, ending in a capstone where students apply AI to a real-world problem.

Related Certification Programs

Intel AI for Future Workforce | Intel Edge AI | OpenVINO Toolkit | Computer Vision with Intel AI

Outcomes

- Explain how AI and ML systems are designed, trained and deployed
- Work with datasets and basic machine learning workflows
- Identify real problems that AI can solve and apply it ethically
- Build an AI project portfolio for internships and higher studies

02 · IBM CENTRE OF EXCELLENCE · IBM SKILLSBUILD LAB

IBM SkillsBuild Professional Development Training

Explore. Develop. Achieve.

Run on IBM SkillsBuild, IBM's official learning platform, this training at EIT combines in-demand technical skills with the workplace competencies employers expect. Students learn web development and data analytics through guided digital modules and lab practice, while building communication and professional skills that make them interview-ready.

What You Will Learn

- Fundamentals of Web Development
- Responsive Design & UX Basics
- Data Handling & Visualization
- Business Communication & Presentation
- Resume & Interview Preparation
- HTML, CSS & JavaScript Essentials
- Introduction to Data Analytics
- AI Fundamentals
- Workplace Ethics & Collaboration
- Capstone Project

Who Should Join

- Students aiming for web development or data analyst roles
- Learners who want IBM-issued digital credentials
- Students seeking a balance of technical and career skills

Learning Approach

> Students progress through self-paced SkillsBuild modules supported by mentor-led lab workshops, team assignments and regular skill assessments, earning IBM digital badges as they complete each learning path.

Related Certification Programs

IBM Data Analyst | IBM Full Stack Software Developer | IBM AI Fundamentals | IBM Generative AI Engineering

Outcomes

- Design and build responsive websites
- Organise, analyse and visualise business data
- Communicate and present professionally in corporate settings
- Hold verifiable IBM digital badges on their professional profile

03 · MICROSOFT CENTRE OF EXCELLENCE · MICROSOFT AZURE LAB

Microsoft Azure Fundamentals (AZ-900) Training

Empower. Transform. Excel.

Conducted in EIT's Microsoft Azure Lab and guided by a Certified Microsoft Trainer (CMT), this training builds a strong foundation in cloud computing on Microsoft Azure. Students learn how enterprises run, secure and manage their infrastructure in the cloud, gain real experience on the Azure Portal, and prepare for the globally recognised AZ-900 certification.

What You Will Learn

- Cloud Computing Concepts & Models
- Azure Compute & Virtual Machines
- Azure Storage & Database Fundamentals
- Security, Governance & Compliance
- Monitoring & Resource Management
- Azure Architecture, Regions & Availability Zones
- Azure Networking Services
- Identity, Access & Microsoft Entra ID
- Pricing, SLAs & Cost Management
- Practice Assessments & Exam Preparation

Who Should Join

- Students starting a career in cloud computing
- Learners preparing for their first Microsoft certification
- Students interested in IT infrastructure, DevOps or security

Learning Approach

> Instructor-led sessions by a Certified Microsoft Trainer are paired with live demonstrations and hands-on exercises on the Azure Portal, followed by practice tests modelled on the certification exam.

Related Certification Programs

AZ-900 Azure Fundamentals | AI-900 Azure AI Fundamentals | AZ-104 Azure Administrator | PL-300 Power BI Data Analyst

Outcomes

- Explain cloud service and deployment models with confidence
- Create and manage Azure resources, VMs and storage
- Apply identity, security and cost-management principles
- Attempt the Microsoft AZ-900 certification exam with confidence

04 · SALESFORCE CENTRE OF EXCELLENCE · CRM & CLOUD INNOVATION LAB

Salesforce Administrator & Platform Training

Connect. Automate. Succeed.

Delivered in EIT's CRM & Cloud Innovation Lab using Salesforce Trailhead, this training teaches students how the world's leading CRM platform runs sales, service and marketing for businesses of every size. Students configure real Salesforce orgs, automate business processes with Flow, build reports and dashboards, and explore AI-powered CRM.

What You Will Learn

- CRM Concepts & Salesforce Platform Basics
- Data Management & Import Tools
- Business Process Automation with Flow
- Sales Cloud & Service Cloud Fundamentals
- AI in CRM & Agentforce Basics
- Objects, Fields & Data Modelling
- Users, Profiles & Security Model
- Reports & Dashboards
- Lightning App Builder & Low-Code Apps
- Trailhead Superbadge & Capstone Project

Who Should Join

- Students interested in CRM, cloud and business technology
- Learners from both technical and management backgrounds
- Students aiming for Salesforce Admin or Developer roles

Learning Approach

> Students learn by doing in their own Trailhead Playgrounds, completing trails, badges and a superbadge-style capstone built around a realistic business scenario, with mentor reviews at every stage.

Related Certification Programs

Salesforce Certified Administrator | Platform App Builder | Platform Developer I | Salesforce AI Associate

Outcomes

- Configure and administer a Salesforce org
- Automate business processes and build insightful dashboards
- Design secure data models and user access
- Present a verified Trailhead profile to recruiters

05 · CISCO CENTRE OF EXCELLENCE · CYBERSECURITY & NETWORKING LAB

Cisco Cybersecurity Essentials Training

Secure. Connect. Evolve.

Based on the Cisco Networking Academy curriculum and run in EIT's Cybersecurity & Networking Lab, this training prepares students to understand, protect and defend modern digital systems. Students learn how networks work, how cyber attacks happen, and how organisations detect and respond to threats, including the growing role of AI in cybersecurity.

What You Will Learn

- Introduction to Cybersecurity
- Cyber Threats, Malware & Attack Vectors
- Data Privacy & Protection
- Ethical Hacking Awareness
- SOC Basics & Incident Response
- Networking Fundamentals
- Network Security & Secure Design
- Identity & Access Management
- AI in Cybersecurity
- Real-World Security Scenarios & Capstone

Who Should Join

- Students interested in cybersecurity and ethical hacking
- Learners planning careers in networking or SOC operations
- Anyone who wants to understand digital security deeply

Learning Approach

> Concepts are reinforced through interactive security simulations, Packet Tracer-style networking activities and case studies of real cyber incidents, ending with a practical security capstone.

Related Certification Programs

Cisco Cybersecurity Essentials | Networking Basics | CCNA | Ethical Hacker

Outcomes

- Identify common cyber threats and vulnerabilities
- Apply network security and data protection best practices
- Analyse security incidents and recommend responses
- Build a foundation for CCNA and advanced security certifications

06 · NASSCOM CENTRE OF EXCELLENCE · FUTURESKILLS PRIME LAB

NASSCOM FutureSkills Prime Training

Learn. Upskill. Transform.

Delivered through FutureSkills Prime, the digital skilling initiative of NASSCOM and the Ministry of Electronics & Information Technology (MeitY), this training gives EIT students broad exposure to the technologies shaping India's digital economy. Students explore AI, cloud, cybersecurity, data science and software development, and choose a specialisation that matches their career goals.

What You Will Learn

- Artificial Intelligence Fundamentals
- Cybersecurity Essentials
- Software Development Fundamentals
- Data Visualization
- Agile Development Basics
- Cloud Computing Concepts
- Data Science & Analytics
- Generative AI & Prompt Engineering
- Innovation & Design Thinking
- Industry-Oriented Capstone Project

Who Should Join

- Students exploring which emerging technology to specialise in
- Learners who want government-recognised digital skill badges
- Students across engineering and management programs

Learning Approach

> Students follow structured FutureSkills Prime learning paths with mentor support in the lab, complete practical assessments and industry-oriented projects, and earn digital skill badges as they progress.

Related Certification Programs

Artificial Intelligence | Data Science | Generative AI | Full Stack Development

Outcomes

- Understand and compare key emerging digital technologies
- Apply AI, data and cloud concepts to practical problems
- Collaborate in multidisciplinary technology projects
- Hold industry-recognised FutureSkills Prime credentials
