PROFESSIONAL DEVELOPMENT DIVISION

Value-Added Training Programs

At Echelon Institute of Technology, a degree is only the beginning. Our Professional Development Division runs focused value-added trainings that sit alongside the regular curriculum and close the gap between what students study in class and what recruiters test on day one. Every training at EIT is mentor-led, practice-heavy, and mapped to the coding assessments, technical interviews, and workplace expectations our students actually face during placements.

01 **Data Structures & Algorithms (DSA)**
Think logically. Code efficiently. Crack interviews.

02 **Full Stack Web Development**
Design. Build. Deploy.

03 **Object-Oriented Programming with Java**
Write clean. Build robust. Think in objects.

04 **Soft Skills Training**
Communicate. Collaborate. Succeed.

05 **Digital Literacy**
Learn. Connect. Stay safe online.

TRAINING 01

Data Structures & Algorithms (DSA)

Think logically. Code efficiently. Crack interviews.

The EIT DSA training turns programming knowledge into problem-solving ability. Students move from understanding how data is stored to choosing the right structure and algorithm for a problem, and then writing clean, efficient solutions under time pressure, exactly as they must in online coding rounds and technical interviews.

What You Will Learn

- Complexity Analysis & Big-O Thinking
- Linked Lists, Stacks & Queues
- Hashing, Two-Pointer & Sliding Window Patterns
- Heaps & Priority Queues
- Greedy Methods & Dynamic Programming
- Arrays, Strings & Recursion
- Searching & Sorting Techniques
- Trees & Binary Search Trees
- Graphs: BFS, DFS & Shortest Paths
- Timed Interview Problem Sessions

Who Should Join

- Students preparing for placement coding rounds
- Learners aiming for product-based companies
- Anyone starting competitive programming

Learning Approach

> Concept sessions are followed by guided problem sets of rising difficulty, weekly timed coding challenges, and mentor reviews of student solutions, with focus on reasoning, not memorising answers.

Outcomes

- Break down unfamiliar problems into solvable steps
- Select appropriate data structures and algorithms with justification
- Analyse and optimise time and space complexity
- Perform confidently in online coding tests and whiteboard interviews

TRAINING 02

Full Stack Web Development

Design. Build. Deploy.

The EIT Full Stack training takes students from their first web page to a complete, live web application. Students work across the front end, the back end, and the database, learning how the pieces of a modern web product connect, and finish with a deployed project they can show to recruiters.

What You Will Learn

- HTML5, CSS3 & Responsive Layouts
- React.js & Component-Based Interfaces
- Designing & Consuming REST APIs
- Authentication & Web Security Basics
- Deployment & Hosting
- Modern JavaScript (ES6+)
- Node.js & Express.js Servers
- MongoDB and SQL Databases
- Git, GitHub & Team Workflows
- Capstone: End-to-End Web Application

Who Should Join

- Students interested in web and software development careers
- Learners who want a project portfolio for internships
- Aspiring freelancers and startup builders

Learning Approach

> Every module ends in a working build. Students code along in lab sessions, collaborate through Git like a real development team, and present their capstone project for mentor and peer review.

Outcomes

- Build responsive, interactive user interfaces
- Develop secure back-end services and APIs
- Design and connect databases to applications
- Deploy a full stack project and present it in interviews

TRAINING 03

Object-Oriented Programming with Java

Write clean. Build robust. Think in objects.

The EIT OOPs with Java training builds the design mindset behind large, maintainable software. Using Java, one of the most widely used languages in enterprise and Android development, students learn to model real-world problems as classes and objects and to write code that is structured, reusable, and easy to extend.

What You Will Learn

- Java Fundamentals: JDK, JRE & JVM
- Classes, Objects & Constructors
- Inheritance & Polymorphism
- Exception Handling
- File Handling & Multithreading Basics
- Data Types, Operators & Control Flow
- Encapsulation & Abstraction
- Interfaces & Abstract Classes
- Collections Framework
- Mini Project in Java

Who Should Join

- Students beginning their programming journey
- Learners preparing for Java-based placement tests
- Students planning to move into Spring Boot or Android

Learning Approach

> Each OOP principle is taught through a relatable real-world model, then reinforced with hands-on lab programs and a mini project that brings all four pillars of OOP together.

Outcomes

- Apply encapsulation, abstraction, inheritance and polymorphism correctly
- Write structured, reusable and readable Java programs
- Handle errors and work with Java collections confidently
- Build a strong base for DSA, Spring Boot and Android development

TRAINING 04

Soft Skills Training

Communicate. Collaborate. Succeed.

Technical skill gets a student shortlisted; soft skills get them selected. The EIT Soft Skills training builds the confidence, communication and professional behaviour that recruiters look for in group discussions, interviews and the first year at work, through activity-based sessions rather than lectures.

What You Will Learn

- Verbal & Non-Verbal Communication
- Group Discussion Techniques
- Teamwork & Collaboration
- Leadership & Decision Making
- Professional Etiquette & Grooming
- Public Speaking & Presentations
- Interview Skills & Mock Interviews
- Time Management
- Emotional Intelligence
- Resume & LinkedIn Profile Building

Who Should Join

- Students in pre-placement and final years
- Learners who want to speak and present with confidence
- Anyone preparing for interviews and group discussions

Learning Approach

> Role plays, mock GDs, recorded presentations with feedback, and one-on-one mock interviews help students practise in a safe environment before facing real recruiters.

Outcomes

- Express ideas clearly and confidently in English
- Perform effectively in group discussions and interviews
- Work productively in teams and manage time well
- Present a polished professional profile on paper and online

TRAINING 05

Digital Literacy

Learn. Connect. Stay safe online.

The EIT Digital Literacy training makes sure every student, from any branch or background, can use digital tools confidently, productively and safely. It covers the everyday technology skills needed in college, at work and in daily life, from office tools and online collaboration to cyber safety and AI-powered productivity.

What You Will Learn

- Computer & Operating System Basics
- Documents with MS Word / Google Docs
- Presentations with PowerPoint / Google Slides
- Digital Payments & e-Governance Services
- Responsible Use of Social Media
- Internet, Email & Effective Online Search
- Spreadsheets with MS Excel / Google Sheets
- Cloud Storage & Online Collaboration
- Cyber Safety & Password Hygiene
- AI Tools for Everyday Productivity

Who Should Join

- First-year students across all programs
- Students from non-computer backgrounds
- Anyone who wants to work smarter with digital tools

Learning Approach

> Short, hands-on lab sessions where students complete practical tasks such as preparing a report, building a spreadsheet or securing an account, so every skill is learnt by doing.

Outcomes

- Use office and collaboration tools for academic and professional work
- Find, evaluate and share information online effectively
- Protect personal data and stay safe from online fraud
- Use AI tools responsibly to save time and improve work quality
